

NEUMÁTICA E HIDRÁULICA

FLUIDOS

Presión: se define como la relación entre la fuerza ejercida sobre la superficie de un cuerpo.

$$\text{Presión} = \text{Fuerza} / \text{Superficie}$$

Unidades: $1 \text{ bar} = 1 \text{ kg/cm}^2 = 10^5 \text{ pascal}$

$$1 \text{ pascal} = 1 \text{ N/m}^2$$

FLUIDOS

Caudal: es la cantidad de fluido que atraviesa la unidad de superficie en la unidad de tiempo.

$$\text{Caudal} = \text{Volumen} / \text{tiempo}$$

$$\text{Volumen} = \text{superficie} \times \text{longitud}$$

$$\text{Caudal} = \text{superficie} \times \text{longitud} / \text{tiempo}$$

$$\text{Caudal} = \text{Superficie} \times \text{Velocidad}$$

$$\text{Unidad: } m^3 / \text{sg}$$

$$1 m^3 / \text{sg} = 100 \text{ l} / \text{sg}$$

ELEMENTOS DE LOS CIRCUITOS NEUMÁTICOS

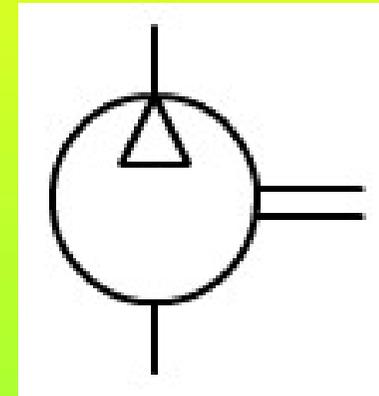

- Elementos generadores (compresores)
- Unidad de mantenimiento:
 - Filtro
 - Lubricador
 - Regulador de presión
 - Manómetro
- Tuberías
- Válvulas:
 - Distribuidoras:
 - 2/2
 - 3/2
 - 4/2
 - 5/2
 - 4/3
 - De bloqueo:
 - Antirretorno
 - Selectora
 - Simultaneidad
 - Reguladoras de flujo:
 - Unidireccional
 - Bidireccional

ELEMENTOS DE LOS CIRCUITOS HIDRÁULICOS

- Grupo motriz:
 - Bomba
 - Motor eléctrico de accionamiento
- Unidad de mantenimiento:
 - Filtro
 - Regulador de presión
 - Manómetro y caudalímetro
- Tuberías
- Depósito
- Válvulas:
 - Distribuidoras:
 - 2/2
 - 3/2
 - 4/2
 - 5/2
 - 4/3
 - De bloqueo:
 - Antirretorno
 - Selectora
 - Simultaneidad
 - Reguladoras de flujo:
 - Unidireccional
 - Bidireccional
